

Hong Wang

Gender: Male

Date of Birth: July 12, 2006

Phone: 18081299137 / 0134454019 (Malaysia)

Email: chriswangjob@163.com

GitHub: <https://github.com/Chrisbetheking>

Portfolio: <https://chrisbetheking.github.io/WANGHONG-s-Resume-Website/>

Internship Availability: July 2026 - December 2026

Education

Asia Pacific University (APU)

Sep 2024 - Sep 2027

Bachelor of Computer Science

Internship Experience

Chengdu Hongqi Education Technology Co., Ltd.

Jan 2025 - Mar 2025

AI Agent Development Intern

Chengdu, China

- **Business Process Improvement:** Participated in building an AI agent system from 0 to 1, covering front-end interfaces, business logic, data processing, and multi-platform access; improved sales query efficiency by 60%+ and reduced repetitive teacher-side work by 70%.
- **Content Automation:** Built a short-video script generation module that helped sales staff quickly create basic promotional copy based on different products and student needs, reducing repeated writing effort.
- **Query and Recommendation:** Developed real-time information search, conditional filtering, data display, quick-copy features, CGPA conversion, and university/program recommendation functions to support faster school and major matching.
- **Multi-platform Integration:** Integrated WeChat customer service, DingTalk, and Feishu entry points to reduce tool switching and information fragmentation, improving internal collaboration efficiency.
- **Engineering Delivery:** Gained end-to-end practice in internal systems, AI interfaces, workflow optimization, and multi-platform adaptation, with the ability to break down real business needs into usable product functions.

Project Experience

Enterprise AI Agent Workflow System (Internship Project)

Sanitized Demo: <https://chrisbetheking.github.io/ai-agent-workflow-platform/>

- **Project Background:** Based on an internal enterprise AI agent system developed during my internship, supporting education consulting scenarios such as sales queries, university information retrieval, CGPA conversion, school recommendation, and content generation.
- **Workflow Design:** Helped organize scattered query, recommendation, conversion, and content generation tasks into a unified workflow, improving the process from user input to structured output.
- **Front-end Interaction:** Worked on dynamic forms, task switching, structured result cards, quick-copy features, and history records to improve clarity and efficiency when handling complex business information.
- **Platform Integration:** Participated in Prompt flow testing, query logic testing, and multi-platform access testing for WeChat customer service, DingTalk, and Feishu internal use cases.
- **Public Demo Scope:** The online link is a sanitized demo showing workflow structure and front-end interaction only; it does not include company data, business rules, or backend keys. The real project was used internally during my internship.

Responsive Interactive Couple Website (Independent Native Front-end Project)

Live Demo: <https://chrisbetheking.github.io/whwithyn/>

Source Code: <https://github.com/Chrisbetheking/whwithyn>

- **Full-cycle Development:** Independently completed the full workflow from visual design, page development, and interaction implementation to GitHub Pages deployment, demonstrating the ability to deliver a native front-end project end to end.
- **Interaction Implementation:** Used HTML, CSS, and JavaScript to implement a typewriter effect, real-time timer, modal windows, click effects, animation feedback, and responsive layouts for both desktop and mobile.

- **Form Service:** Integrated EmailJS to support online message forms, validation, status feedback, and email delivery, completing the data submission flow for a static website.

AI Medical Health Information Retrieval Demo

Live Demo: <https://chrisbetheking.github.io/medical-qa-demo/>

Colab: https://colab.research.google.com/drive/1Wd7LnhYon_byAwUA_8r1V4-bhy46LuRH?usp=sharing

- **System Development:** Participated in developing a Python-based medical health information retrieval demo that returns related health information, matching rationale, and risk reminders after users enter symptom descriptions.
- **Text Processing:** Worked on symptom description recognition and keyword matching through text cleaning, symptom term extraction, and rule-based matching to improve input understanding accuracy.
- **Interaction Optimization:** Designed input forms, result cards, risk prompts, and task-switching logic so that query results are presented in a structured and easy-to-read format.
- **Safety Boundary:** Reframed diagnostic wording as health information matching and medical consultation reminders, clearly stating that the system cannot replace doctor diagnosis, prescriptions, or treatment advice.
- **Testing and Validation:** Validated matching performance using self-built test cases, reaching about 80% keyword matching accuracy and gaining practical experience in basic NLP and information retrieval.

Java Student Grade Management System

Live Demo: <https://chrisbetheking.github.io/java-student-management-system/java-grade-demo.html>

Source Code: <https://github.com/Chrisbetheking/java-student-management-system>

- **System Design:** Designed and implemented a student grade management system covering grade statistics, resit list filtering, and grade data management, simplifying manual processing workflows.
- **Grade Calculation:** Developed the grade calculation module based on school grading rules to produce course statistics, final grade calculations, and final result outputs with about 95% calculation accuracy.
- **Structure Optimization:** Optimized the code structure and unified module development logic, improving maintainability and extensibility while reducing overall development time by about 10%.
- **Testing and Fixes:** Participated in system testing and issue fixing to improve stability, reduce failure rate by about 20%, and improve data processing efficiency and reliability.

Flutter Campus Shuttle App

Live Demo: <https://chrisbetheking.github.io/Flutter-Campus-Shuttle-App/>

Source Code: <https://github.com/Chrisbetheking/Flutter-Campus-Shuttle-App>

- **System Design:** Developed a Flutter-based campus transport mobile demo with Student, Driver, and Admin role entries, covering shuttle booking, parking reservation, passenger check-in, and booking status management.
- **Page Development:** Built dashboards, route detail pages, OpenStreetMap route playback, parking zones, My Bookings, and admin overview pages using Flutter, Dart, and Material 3.
- **Map Visualization:** Integrated OpenStreetMap to display shuttle routes and implemented route playback based on local route points; the map movement is simulated and does not use real GPS tracking.
- **State Management:** Implemented local booking status transitions, including Reserved, Checked In, Completed, and Cancelled; bookings created by students can be viewed by both driver and admin views.
- **Deployment:** Deployed the Flutter Web demo to GitHub Pages for direct display on my personal portfolio website.

Skills

- **Front-end Development:** Proficient in HTML5, CSS3, and JavaScript, with experience in DOM operations, event handling, form development, responsive layouts, CSS animations, static website development, and GitHub Pages deployment.
- **Mobile Development:** Familiar with Flutter and Dart, with experience in mobile page development, component-based UI design, navigation, local state management, map visualization, and responsive interface implementation.
- **Programming Languages:** Proficient in Python for text processing, basic data analysis, and AI information retrieval system development; familiar with Java OOP concepts and C language fundamentals for basic system modules.
- **Databases and Data Processing:** Familiar with SQL queries, data filtering, statistical summaries, and basic database management, supporting project-level data processing, information retrieval, and result analysis.

- **AI and Application Development:** Understand basic machine learning and NLP concepts, with project experience in AI agent workflows, prompt design, information retrieval systems, and medical health information retrieval demos.
- **Development Tools:** Experienced with VS Code, Cursor, NetBeans, Google Colab, Git, GitHub, and WSL, with practical experience in debugging, version control, project deployment, and online publishing.
- **Office and General Skills:** Proficient in Excel, PowerPoint, and Word for data organization, report writing, and project presentation; able to perform requirement analysis, independent development, troubleshooting, deployment, and project review.
