Portfolio: <https://chrisbetheking.github.io/WANGHONG-s-Resume-Website/>

Internship Availability: Jul 2026 - Dec 2026

Date of Birth: Jul 12, 2006

Email: chriswangjob@163.com

Education

Asia Pacific University of Technology & Innovation

Bachelor of Computer Science

Sep 2024 - Sep 2027

Internship Experience

Chengdu Hongqi Education Technology Co., Ltd.

Jan 2025 - Mar 2025

AI Agent Development Intern

Chengdu, China

- **Business delivery:** Helped build an internal AI tool from scratch for education consulting scenarios, including sales search, teacher matching, CGPA conversion, school recommendation and content generation.
- **Frontend workflow:** Worked on dynamic forms, task switching, structured result cards, quick-copy actions and history records to make daily consulting tasks easier to operate.
- **Content automation:** Built modules for short-video scripts and sales copy, allowing consultants to generate reusable material based on product type, student profile and follow-up context.
- **Multi-platform integration:** Assisted with WeChat service, DingTalk and Feishu entry-point testing and integration, reducing information scattered across tools.
- **Measured impact:** After internal rollout, sales query efficiency increased by 60%+ and repetitive teacher-side work was reduced by 70%; gained hands-on experience in requirement breakdown, debugging, release and iteration.

Project Experience

EduAgent - AI + RAG Study-Abroad Consulting Workspace (Full-Stack Project)

Demo: <https://edu-agent-rag-workspace.vercel.app/>

- **Product scope:** Built a study-abroad consulting workspace covering AI consultation, lead content, application dossier, knowledge base, planning engine and system logs.
- **Frontend:** Developed a React + TypeScript multi-page dashboard with complex forms, collapsible result sections, section navigation, copy/export actions, guest mode, responsive layout, local state persistence and Error Boundary protection.
- **Backend:** Used NestJS to wrap DeepSeek API calls, JWT auth, guest quota control, fallback handling and Markdown/JSON export; stored documents, chunks, sessions, messages and call logs with Supabase/PostgreSQL.
- **RAG and algorithm:** Implemented document import, auto chunking, retrieval-augmented answers and source references; designed a weighted-fit scoring algorithm using GPA, major match, projects, language and budget to support reach/match/safety planning.
- **Observability:** Logged model name, latency, RAG hits, tool chain and error details; added filtering for slow requests and failed calls to support debugging and quality review.

Enterprise AI Agent Workflow System (Internship Project)

Sanitized Demo: <https://chrisbetheking.github.io/ai-agent-workflow-platform/>

- **Background:** Participated in an internal AI agent system for education consulting, covering sales query, school information retrieval, CGPA conversion, school recommendation and content generation.
- **Contribution:** Helped turn scattered query, recommendation, conversion and generation tasks into a unified workflow; worked on frontend interaction, structured result display, quick-copy actions and history records.
- **Public note:** The online demo is a sanitized version showing workflow structure and frontend interaction only; no internal data, private business rules or backend keys are included.

Project Experience

Java Student Grade Management System

Demo: <https://chrisbetheking.github.io/java-student-management-system/java-grade-demo.html>

Source: <https://github.com/Chrisbetheking/java-student-management-system>

- **System design:** Designed and implemented a grade management system covering score statistics, resit-list filtering and grade data management.
- **Rule calculation:** Built score calculation modules based on school grading rules, including course score aggregation, final score calculation and result output, with about 95% calculation accuracy in test cases.
- **Testing and cleanup:** Participated in testing and bug fixing, unified module logic and improved maintainability and data-processing stability.

Smart Campus Shuttle System

Demo: <https://chrisbetheking.github.io/Flutter-Campus-Shuttle-App/>

Source: <https://github.com/Chrisbetheking/Flutter-Campus-Shuttle-App>

- **Mobile development:** Built a Flutter/Dart web demo with student, driver and admin entry points.
- **Workflow:** Implemented shuttle booking, parking reservation, passenger check-in, reservation status updates and admin overview; bookings created by students can be viewed by driver and admin pages.
- **Map view:** Integrated OpenStreetMap for shuttle route display and simulated route playback based on local route points; the map track is for demo use rather than real GPS tracking.

AI Health Information Retrieval Demo

Demo: <https://chrisbetheking.github.io/medical-ga-demo/>

Colab: https://colab.research.google.com/drive/1Wd7LnHYon_byAwUA_8r1V4-bhy46LuRH?usp=sharing

- **Retrieval logic:** Participated in a Python-based health information retrieval demo that returns related health information, matching evidence and risk reminders from symptom descriptions.
- **Text processing:** Worked on symptom keyword extraction, rule-based matching and sample-based validation; keyword matching accuracy reached about 80% on self-built examples.
- **Safety boundary:** Rewrote diagnosis-like wording into health information matching and medical-care reminders, clearly stating that the system cannot replace doctors, prescriptions or treatment advice.

Native Frontend Interactive Website

Demo: <https://chrisbetheking.github.io/whwithyn/> Source: <https://github.com/Chrisbetheking/whwithyn>

- **Frontend practice:** Independently completed page design, interaction implementation and GitHub Pages deployment with HTML/CSS/JavaScript, including animations, popups, timer, form validation and mobile adaptation.
- **Form flow:** Integrated EmailJS for online messages, status feedback and email sending, making a static website capable of basic data submission.

Skills

- **Frontend:** HTML5, CSS3, JavaScript, React and TypeScript; able to build component-based pages, complex forms, state persistence, collapsible results, responsive layouts and mobile-friendly interfaces.
- **Backend and data:** Basic experience with Node.js/NestJS, REST APIs, JWT auth, API error handling and logging; familiar with SQL queries, filtering, aggregation and basic PostgreSQL/Supabase usage.
- **AI application:** Hands-on experience with LLM API integration, prompt design, RAG document chunking/retrieval, Agent tool orchestration and AI call observability.
- **Mobile development:** Flutter and Dart basics, including page navigation, local state management, map display and Flutter Web deployment.
- **Programming:** Python for text processing, basic data analysis and information retrieval; Java OOP and C fundamentals for basic system modules.
- **Tools:** VS Code, Cursor, NetBeans, Google Colab, Git, GitHub and WSL; comfortable with debugging, version control, deployment and online release.
